F8914 ZigBee TERMINAL TECHNICAL SPECIFICATION

General

F8914 ZigBee Terminal is a kind of data cellular terminal device that provides data transfer function by ZigBee network.

It adopts high-powered industrial ZigBee solution and embedded real time operating system. It supports RS232 and RS485 (or RS422) port that can conveniently and transparently connect one device to a ZigBee network, allowing you to connect to your existing serial devices with only basic configuration. It has low power consumption states in which the power consumption 2.2mA@12VDC. It has compatible digital 5 I/O channel, ADC, input pulse counter and pulse wave output function.

It has been widely used on M2M fields, such as intelligent transportation, smart grid, industrial automation, telemetry, finance, POS, water supply, environment protection, post, weather, and so on.
